Title: 3D aided face recognition
Author: Liming Chen, LIRIS, Ecole Centrale de Lyon

Abstract
The advent of 3D sensors for facial data open new avenues for research in Face Recognition. Specifically it enables 3D-3D face recognition and 3D-2D face recognition. It this talk, I will highlight the challenges and provide an overview of the methods developed from these two classes of problems, in particular through our own works within the field.
